CLEANSPACE REGULATORY & COMPLIANCE STATEMENT

This letter confirms that CleanSpace Technology Pty Ltd holds certifications that require CleanSpace products to conform to internationally recognised Respiratory Protection Standards for product performance and quality assurance. The list of the CleanSpace certifications are included below.

Certification requires CleanSpace products to be tested in independently certified laboratories in Australia, Europe and USA.

CleanSpace is committed to the highest quality assurance and product guarantee. With our origins in the medical device industry our quality management system and continuous improvement programs are world class. CleanSpace products are manufactured in our facility in Sydney, Australia. Every CleanSpace product including the respirators, masks and filters are 100% tested prior to shipping. Respirator testing includes both electronic (audible and visual alarms) and functional testing (seal, airflow and motor control). Filters are tested to achieve 99.99% or higher filtration efficiency for particulates down to 0.3 microns.

As part of the approvals, the Company's manufacturing facility and the Quality Management System are audited at a minimum quarterly by independent certified bodies including NIOSH, Intrinsically Safe and ISO9001. Note the Intrinsically safe approvals (for use in explosive environments) are a stringent certification process.

CleanSpace International Approvals:

- EN12942 (CE Mark) – Europe
- NIOSH (Product) – USA
- NIOSH (Quality) - USA
- ASNZS1716 – Australia and NZ
- TGA Class 1 – Australia
- HSA Class A - Singapore
- IP66 Rating (Dust/water ingress) – International
- ISO 9001 (Quality) – International
- IECEX (Intrinsically Safe) – International
- IECEX (Quality) – International
- ATEX (Intrinsically Safe) – Europe
- ATEX (Quality) – Europe
- ETL (Intrinsically Safe, product) – USA
- ANSI Z87.1 Impact Rating
- AS NZS 1337.1 Impact Rating

These Certification Approvals require product, design and quality management system review, auditing of manufacturing facilities, supply chain and equipment testing at certified independent laboratories. Our Quality Management System requires that CleanSpace maintains component and testing records for all products sold and issues raised in the production process and in the field.

The Company maintains a continuous improvement system, which includes global field surveillance. Through the Company's warranty and return policy and process, reported product faults trigger a "Corrective and Preventative Actions" (CAPA) to be raised, investigated and actions implemented to prevent the fault recurring. Field surveillance and the CAPA process is audited as part of the Company's compliance requirements.

CleanSpace Technology offers a minimum two (2) year warranty on all products sold from date of sale by the distributor. The Company requires its authorised dealers to support CleanSpace end users with product training, technical information, reporting faults and replacing product.

The Company and our products are ROHS (hazardous substances) and REACH (chemical substances) compliant.
