

CleanSpace Filters - Nuisance Filter Statement

MANUFACTURER'S STATEMENT

The CleanSpace CST1006 Nuisance Filter is certified and approved by NIOSH to meet the HE particulate filtration (99.97%) requirements under NIOSH 42 CFR Part 84.

NIOSH does not test or certify nuisance filters. There is no recognition from NIOSH of the CleanSpace CST1006 Nuisance Filter's nuisance (or any other) gas filtering abilities.

The CleanSpace CST1006 TM3ABEK1P R SL Combined Filter is the same filter and is certified under European Standard EN 12942. As per the European PAPR standards, the CleanSpace CST1006 TM3ABEK1P R SL Combined Filter provides suitable protection against airborne particulates (dust, mists and fumes), organic and inorganic gases or vapours, solvents ammonia and sulphur dioxide (boiling point > 65°C).

This filter will filter out gases specified in the US standards but not for the length of time required by NIOSH standards when tested at the nominal testing flow rate. While it can provide practical protection (as demonstrated by EN12942 approval and certification) **it is not suitable for gas concentration above OSHA PEL for an employer who wishes to have an OSHA compliant gas filtration system.**

All CleanSpace filters must be used in accordance with the manufacturer's instructions.
